SAVISION PREVIEWS NEW FREE MOBILE-FRIENDLY HTML5 DASHBOARDING SOLUTION AT SYSTEM CENTER UNIVERSE NORTH AMERICA 2015

Savision's new HTML5 based dashboarding tool provides meaningful, easily customizable visualizations of critical data and information from Microsoft System Center Operations Manager.

DALLAS, Texas – February 4, 2015 – Savision, the market leader of Business Service and Cloud Management solutions for Microsoft System Center, announced today the upcoming launch of **Dashboards by Savision** at System Center Universe North America. This new solution takes the dashboarding concept introduced by Microsoft in System Center 2012 to the next level. It provides customers with a fast, and fluid HTML5 based tool, including a free version, that can be easily customized using drag and drop functionality and viewed on any mobile device anywhere.

Rob Doucette, CTO of Savision, commented "With the release of a new mobile-friendly dashboarding solution, Savision reinforces our commitment to helping our customers get the right information when and where they need it. We understand their need to identify, prioritize, and resolve problems as quickly as possible so they can keep their customers happy and ensure that everything runs as smoothly as possible. **Dashboards by Savision** will help liberate them from the pain of slow loading data and bring them the freedom that mobile devices provide."

The real-time alerts and notifications received almost every minute of the working day from Microsoft System Center by IT operations teams are critical to the identification and resolution of problems, but do they have the information they need to quickly determine what needs to be fixed first? There is no time to be stuck at a desk waiting for critical information to load: System Administrators need to be out and about viewing information on the fly on any device they choose so that they can quickly identify, prioritize, and resolve problems.

Dashboards by Savision can bridge this information gap and make a difference in daily IT operations monitoring activities by offering benefits and features that include:
- A free version
- Fast, HTML5 based, mobile-friendly dashboards, eliminating the need to install Microsoft® Silverlight®
- Easily customizable dashboards using drag and drop functionality
- Seamless integration with Microsoft System Center
- In-Line Authoring
- Ability to focus on business-critical priorities from the perspective of the end user, applications, and infrastructure when used in combination with Savision's flagship product: **Live Maps Unity**, which transforms System Center into a Business Service Management solution

Dashboards by Savision will be available early March 2015.

About Savision
Savision is the market leader in Business Service and Cloud Management solutions for System Center. The company's monitoring and visualizing capabilities bridge the gap between IT and business, by transforming IT data into predictive, actionable and relevant information about the entire cloud and datacenter infrastructure. Savision's intuitive and customizable dashboards provide context for each business service. This results in the prevention of IT-related problems and business downtime, increasing overall organizational efficiency as well as reducing IT operational costs up to 20%.
Savision's solutions scale from small to medium businesses, government bodies as well as Fortune 500 companies operating in different fields and have been adopted by over 700 organizations worldwide. Savision is a Dutch founded company headquartered in Amsterdam with offices in Dallas and Ottawa.
